

## Crown/Onlay Post Operative Instructions

At today's visit you had a crown(s), implant crown(s) or onlay(s) placed in permanently. Your comfort is extremely important to us. These are some of the things that you may experience:

- ◆ The gum tissue in the area treated may be sore for 1-2 days due to local anesthesia.
  
- ◆ The tooth/teeth may be sensitive to hot or cold for a period of 1-7 days. The sensitivity will decrease over time and should not increase. Please call our office if this happens.
  
- ◆ If the bite feels off or awkward, please call for a quick adjustment visit. A light discrepancy in bite can lead to prolonged sensitivity.
  
- ◆ It is important to continue meticulous oral hygiene care. Please call our office if you are experiencing difficulty.
